

Discussion Paper 1, Stat 8801, Spring 2009

Read the paper available on the course web site called “Cannabis and Cancer.”

For class on Wednesday, Feb. 4, be prepared to discuss:

1. What is this paper about? What are the findings?
2. Find one methodological or statistical point that you feel they did correctly, and one that you disagree with or don't understand.
3. Find one thing about the presentation that you found clear, and one thing you would want to improve. For example, are the tables clear, or could a different presentation have improved the paper? Would graphs have helped? What graphs?
